Ulzhan Abdikerova, laboratory assistant at the Fuel Laboratory of the Thermal Automation and Measurement Department of A.Zhakutov CHPP-2

For Ulzhan Abdikerova, a laboratory assistant in the Fuel Laboratory of the Commissioning and Environmental Protection Department, the energy sector is not just a profession, but a way of life she chose once and for all. In the early 1990s, she began working at CHPP-2 in the commissioning shop. Decades have passed since then, but her sense of responsibility for her work and her sincere dedication to her profession has remained unchanged.

From her very first days on the job, it became clear to her: the energy sector relies on precision, attention to detail, and strict adherence to all requirements. Working in the fuel laboratory requires exceptional focus and self-discipline. Here, every analysis contributes to the reliable and safe operation of the equipment, and thus to heat and light for thousands of families in the city.

Years of work have taught her the most important lesson: to value the results of her labor and to be true to her profession. For Ulzhan, it is not enough to simply complete a task; she must do it with quality and responsibility. The station's team has always played a major role in this. She speaks warmly of her colleagues as a united team – experienced, reliable, and genuinely caring, always ready to support, offer advice, and share responsibility.

She considers the energy profession to be truly creative. It is energy professionals who form the foundation of stability, economic development, and people's everyday comfort. For her, AlES is an enterprise with a rich history, strong traditions, and a special atmosphere of respect for work.

Today, it is especially important for Ulzhan Abdikerova to share her accumulated experience with young professionals. She is convinced that when knowledge is passed on with care and attention, it helps build a secure future for the industry. She sees this as a continuation of her professional journey.

Despite the high level of responsibility and strict safety requirements, she would choose this profession again without hesitation. Working at the CHPP-2 named after A.Zhakutov has given her confidence in the future, a sense of purpose, and the realization that her work truly matters.

In life, simple yet profound values are especially important to her – family, health, and honest work. And her professional principle, proven over the years, remains unchanged: to work with precision, responsibility, and sincere respect for the energy profession.
